

TYPES OF FORKLIFTS

COUNTERBALANCE

A counterbalance forklift is a truck with a counterweight in the back that balances the weight of the load being lifted in the front. This design makes them ideal for handling heavy loads and prevents the truck from tipping over.

PALLETE TRUCK

A pallet truck is a wheeled tool used to move and lift pallets. They are also known as pallet jacks, pump trucks, or pallet pumps.

REACH

A reach truck forklift is a type of forklift designed to move pallets in narrow aisles, such as warehouses. They are also known as reach forklifts.

ORDER PICKER

An order picker is a type of lift truck that helps warehouse workers pick items from shelves and transport them to fill orders. They are also known as stock pickers, order selectors, and cherry pickers.

PAPER ROLL SPECIAL FORKLIFT

Roll Special forklift is a powerful lift manufactured specifically to maneuver and stack heavy paper rolls. The Paper Roll Special is also one of the most cost-efficient assets for your paper applications,

SIDELoader

A sideloader is a type of forklift or trailer that can lift and move loads from the side. Sideloaders are used in a variety of industries, including construction, steel, and timber.
